1. Entity-Relationship (ER) Diagram

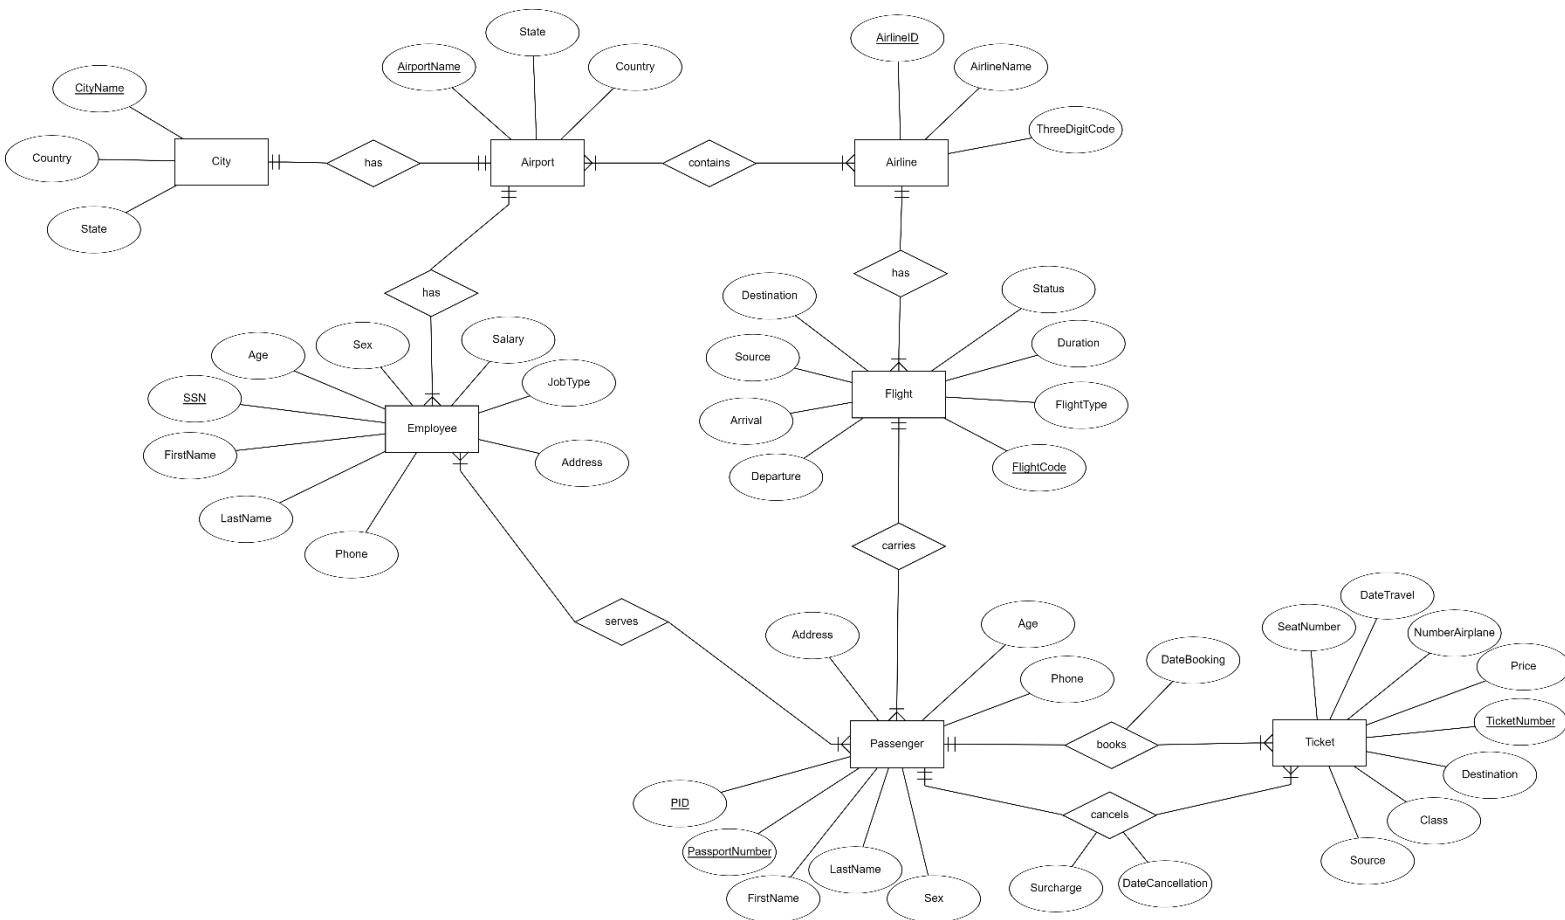

Figure 1: Airport Entity-Relationship (ER) diagram

Entities:

- City

| | | |
|------------------|---------|-------|
| <u>*CityName</u> | Country | State |
|------------------|---------|-------|

- Airport

| | | |
|---------------------|---------|-------|
| <u>*AirportName</u> | Country | State |
|---------------------|---------|-------|

- Airline

| | | |
|-------------------|-------------|----------------|
| <u>*AirlineID</u> | AirlineName | ThreeDigitCode |
|-------------------|-------------|----------------|

- Flight

| | | | | | | | |
|--------------------|-------------|--------|---------|-----------|--------|----------|------------|
| <u>*FlightCode</u> | Destination | Source | Arrival | Departure | Status | Duration | FlightType |
|--------------------|-------------|--------|---------|-----------|--------|----------|------------|

- Passenger

| | | | | | | | |
|------------------------|-------------|-----------|----------|-----|-----|---------|-------|
| <u>*PassportNumber</u> | <u>*PID</u> | FirstName | LastName | Sex | Age | Address | Phone |
|------------------------|-------------|-----------|----------|-----|-----|---------|-------|

- Ticket

| | | | | | | | |
|----------------------|------------|------------|----------------|-------|-------------|-------|--------|
| <u>*TicketNumber</u> | SeatNumber | DateTravel | NumberAirplane | Price | Destination | Class | Source |
|----------------------|------------|------------|----------------|-------|-------------|-------|--------|

- Employee

| | | | | | | | | |
|-------------|-----------|----------|---------|-----|-----|---------|-------|--------|
| <u>*SSN</u> | FirstName | LastName | JobType | Sex | Age | Address | Phone | Salary |
|-------------|-----------|----------|---------|-----|-----|---------|-------|--------|

1.1 ER diagram contains following relationships:

| Entity 1 | Name of the Relationship | Entity 2 | Cardinality |
|-----------|--------------------------|------------|-------------|
| City | has | Airport | 1 : 1 |
| Airport | contains | Airline | m : n |
| Airport | has | Employee | 1 : n |
| Airline | has | Airplane | 1 : n |
| Airplane | carries | Passengers | 1 : n |
| Employee | serves | Passengers | m : n |
| Passenger | books | Ticket | 1 : n |
| Passenger | cancels | Ticket | 1 : n |

| Type of the binary relationship | Relationships in the system |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| one-to-one | A city has only one airport. |
| one-to-many | 1. An airline has multiple airplanes. 2. An airplane carries many passengers. 3. A passenger can book one or more tickets. 4. A passenger can cancel one or more tickets. |
| many-to-many | All International airlines operating through various countries across the world have their offices located in all major cities and airports they cover. Hence, an airport may have many airline offices. |

2. Relational Model (RM)

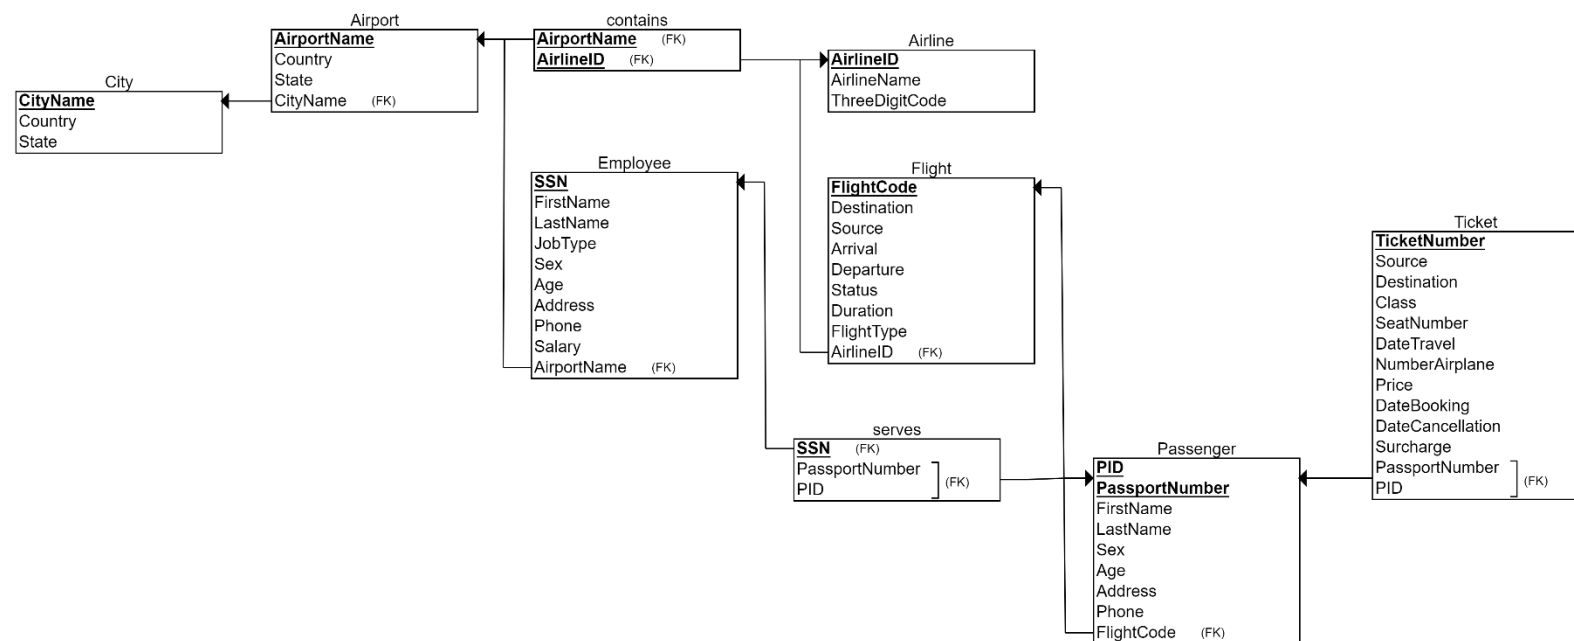

Figure 2. Airport Relational diagram

| Tables of Relational Model (RM) |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| City (* <u>CityName</u> , Country, State) |
| Airport (* <u>AirportName</u> , Country, State, CityName (FK)) |
| Airline (* <u>AirlineID</u> , AirlineName, ThreeDigitCode) |
| Flight (* <u>FlightCode</u> , Destination, Source, Arrival, Departure, Status, Duration, FlightType, AirlineID (FK)) |
| Passenger (* <u>PassportNumber</u> , * <u>PID</u> , FirstName, LastName, Sex, Age, Address, Phone, FlightCode (FK)) |
| Ticket (* <u>TicketNumber</u> , Source, Destination, Class, SeatNumber, DateTravel, NumberAirplane, Price, DateBooking, DateCancellation, Surcharge, PassportNumber (FK), PID (FK)) |
| Employee (* <u>SSN</u> , FirstName, LastName, JobType, Sex, Age, Address, Phone, Salary, AirportName (FK)) |
| serves (* <u>SSN</u> , * <u>PassportNumber</u> (FK), * <u>PID</u> (FK)) |
| contains (* <u>AirportName</u> (FK), * <u>AirlineID</u> (FK)) |

3. SQL DDL script

--Delete databases if they exist--
